

FrameLogic and SUSTAINABILITY

Picture frame moulding, mountboards and backings

We use as many FSC/PEFC certified mouldings, mountboards and backings as possible; that is, product made using timber has been lumbered in compliance with sustainable forestry policies and are also fully recyclable. The Forest Stewardship Council (UK) and PEFC (International), recognises and certifies wood that has been sourced from responsibly managed forests and/or from recyclable materials.

We also use aluminium frames which are easily reusable and recyclable. We do not use any plastic/polymer picture frame mouldings.

Printing inks, paints, stains, tapes, glues, etc.

All our printing inks, paints, stains, most glues and tapes are water based, with no VOC's/solvents.

Packaging

We aim to reuse all the packaging from materials supplied to us, to package our final framed pictures for you. Excess cardboard, paper, wood and glass offcuts all go to recycling.

Energy Use

Apart from our large format printer, computers and vacuum heat press, all other equipment is manual. LED energy saving lighting is employed on-site and our energy, supplied by EON, is 100% renewable.
